Dekfit GrateMate

No more Waste
Grate Problems!

- Floor Grates in domestic bathrooms, kitchens and laundries.
- Commercial kitchens and laundries.
- Quick and easy to install
- Fits both 80 & 100mm grates

Fits both 80/100mm grates

How to fit:

1. If fitting into an 80mm grate, trim cone to the 80mm mark with sharp scissors or Stanley knife. For 100mm grates, simply fit product into waste grate without trimming.
2. Lift grate lid and insert **Dekfit GrateMate** so that it sits just below the top of the grate. Where there is an internal grate, fit the **Dekfit GrateMate** below their level of the grate.
3. Remove **Dekfit GrateMate** and check water mark on the poly pipe to ensure that at least 50mm of the pipe is sitting in the water in the 'S' trap *.
4. Replace **Dekfit GrateMate** and fit grate back into place. †

* If no water mark is visible, the waste pipe is probably longer than usual and the longer poly pipe will be needed to improve sound reduction. Measure from grate to below water level to determine length of pipe required. (20mm ID diam. pvc or poly pipe is available at plumbing and hardware stores).

† If the Dekfit GrateMate is sitting too high to allow the grate to be replaced properly, simply trim the poly pipe so that at least 50mm sits in the water in the 'S' trap.

Applications

- Floor grates in domestic bathrooms, kitchens and laundries.
- Commercial kitchens and laundries.
- More uses in gymnasiums, schools, canteens, kiosks, restaurants, shower blocks, hotels, high rise apartments, surgeries and hospitals.

Retrofitable in minutes
